Scope

Problems regarding the environment such as resources recycling and the disposal technology of industrial wastes, or materials science relating nano-structure and new materials are major research tasks of urgent

necessity in Japan and Korea. The researchers of both countries will get together to hold an international symposium on the research and technology developments effective to reduce global environmental problems. We will discuss the present situation and the future perspective of technology to protect global environments.

The symposium is characterized by discussions with enough time on environmental problems of the both countries. The keynote speakers of USA, India, Korea and Japan will present special topics. It is also expected that this international symposium would provide an opportunity for the intercollegiate exchange between Korea and Japan. This symposium includes poster presentation.

Deadline

Formats of abstract and full paper, and registration form will be uploaded in the HP in Kansai Univ., Japan. The URL of the HP is as follows,
